

Onboarding Tracker — User Guide

How new-hire setup, onboarding, and returning employees work — for HR, IT, managers, teams, and new hires.

What the tracker does

The Onboarding Tracker is one place to set up a new hire, follow their first 90 days, and reactivate accounts for employees returning from leave. When HR submits a new hire, the system does the heavy lifting automatically — it notifies the responsible teams and the new hire’s manager, creates their Microsoft 365 account, sets up their licence, adds them to the right groups, and builds their onboarding journey, with reminders so nothing gets missed. And when someone comes back from maternity or medical leave, HR submits a quick request to have their account switched back to normal.

Who does what

Role	What they do
HR (Lara, Vanisha)	Submit new-hire requests; log returning employees; view all onboarding journeys.
IT (Abhishek, Trevor)	Approve each request and choose the licence — right from the email. The account is then created automatically.
Team owners (IT, HR, Facilities, iCare)	Complete their own setup items for each new hire (PC, printer, access card, iCare, photo ID, etc.).
Managers	View their department’s onboarding progress and follow up if someone falls behind.
New hires	Tick off their own milestones as they are trained on them.

Signing in

Open magma-amgm-it.github.io/magma-onboarding-tracker and sign in with your MAGMA account. What you see depends on your role: HR and IT see everything, managers see their department, and new hires see their own journey.

Setting up a new hire — start to finish

1. **HR submits the request.** Go to New-hire requests → + New request. Enter the name, the email to create, position, department (and unit if there is one), start date, and reporting manager, then tick the setup items each team needs — adding any spec like “Laptop”. Submit.
2. **Everyone is notified.** A “setup needed” email goes to all the teams (IT, HR, Facilities, iCare) and the manager, listing exactly what each one needs to prepare before day one.
3. **IT approves and picks the licence — from the email.** Abhishek and Trevor get an approval email with buttons: Business Premium, Business Basic, None, or Reject. Whoever clicks first decides it — no need to open the app.

4. **The account is created automatically.** On approval, the system creates the Microsoft 365 account with the person's name, sign-in email, job title, and department; assigns the chosen licence; and sets a temporary password they must change at first sign-in. They are added to the relevant groups automatically. (If no Business Premium seat is free, IT gets a "buy a seat" email and the licence is assigned automatically once a seat is bought.)
5. **The password is shared securely.** A tidy email goes to HR and the manager with the sign-in and temporary password, to hand over in person on day one.
6. **They appear in onboarding.** The new hire shows up under their department with their 30/60/90-day milestone journey, ready to go.

The onboarding journey (first 90 days)

- Each department has its own milestones across Month 1, Month 2, and Month 3.
- **The new hire ticks off each milestone themselves** as they are trained on it — it is their record that it was covered. Managers and HR view progress; they do not tick.
- **"Needs attention"** flags anyone who has genuinely fallen behind — a review period has passed (for example, they are past their 30-day mark) but that month's milestones are not all done. A new hire who is simply early in their journey never appears here.

Team setup tasks and reminders

- **Each team completes its own items for a hire.** "My setup tasks" shows your team's queue across all incoming hires.
- **Day-before reminder.** The day before a hire starts, any team that still has unfinished items gets a reminder email listing them, with a "mark done" link for each.
- **Start-date roll-up.** On the morning the hire starts, one summary goes to everyone: "all set" if everything is done, or "still outstanding" with the open items if not — so nothing slips through.

Returning employees (maternity or medical leave)

1. **HR logs the person.** Go to Returning employees → + New returning employee. Search their name (their account already exists), set the return date, and submit.
2. **Everyone is notified.** A heads-up email goes out that a returning-employee request has been logged and is awaiting IT approval.
3. **IT approves.** Abhishek and Trevor get an Approve / Reject email.
4. **On approval.** Their sign-in is switched back on so they can use their email again, and Facilities and iCare are notified to reactivate their access card and system access if needed.

Getting around the dashboard

- **Overview** — headline numbers and a snapshot of each department.
- **Departments (left)** — each department's hires and their progress.
- **Needs attention** — hires who are behind on a milestone period that has already passed.
- **Completed** — hires who have finished every Month 1–3 milestone.

- **My setup tasks** — your team’s setup items across incoming hires.
- **New-hire requests / Returning employees** — the HR and IT workspaces for submitting and approving.
- **Acronyms** — a searchable bilingual glossary (source: ARAISA) for the settlement sector.
- **Activity log** — recent milestone check-offs and new journeys, newest first.

The emails at a glance

When	Email	Goes to
New hire submitted	Setup needed (with the item list)	All teams + the manager
New hire submitted	Licence approval (Approve / Reject)	IT (Abhishek, Trevor)
Account created	Temporary password	HR + the manager
No Premium seat free	Buy a seat	IT
Day before start	Reminder (unfinished items)	The team(s) still open
Start-date morning	All set / still outstanding roll-up	Everyone on the notification
Returning employee logged	Request logged (heads-up)	HR, IT, Facilities, iCare
Returning employee logged	Approve / Reject	IT (Abhishek, Trevor)
Returning approved	Reactivate card / access if needed	Facilities + iCare (cc HR, IT)

A few things to remember

- **New hires:** tick a milestone only once you have actually been trained on it — it is your confirmation that it was covered.
- **Managers:** you do not tick anything; just check your team’s progress and follow up if someone is behind.
- **IT:** the licence choice and the approval both happen from the email — you rarely need to open the app for that.
- **The temporary password** must be changed by the new hire at first sign-in.
